

CC8200 LEAD CONNECTIONS

9PIN D CONNECTIONS

* Note; For later AR8200 series 2 units (after Oct/Nov 2000), the purple wire has been used to provide an AGC signal from the radio. For this reason, early CC8200 leads will not work with later AR8200 S2 sets. All CC8200 leads supplied now (24.11.2000) do not have the purple wire connected and will work with any AR8200 set. To modify an early CC8200 lead to work with any set, **simply cut the purple wire.**

INTERFACE PLUG, END VIEW.
